DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Nylander (US 6,094,173).

Regarding claim 1: Nylander discloses a method for detecting RFID tag signal comprising a plurality of antennas with coils wound in opposite directions and connected in series and placed in a plane for magnetic field generation (col. 3, lines 17-34; Fig. 9) and an output circuit for taking out a differential output between each output of the plurality of antennas for detecting the magnetic field (col. 4, lines 56-67; col. 6, lines 15-33, 47-67; col. 7, lines 1-41).

Regarding claim 3: Nylander discloses the output detects the differential signal from each antenna and amplified it through circuits (80, 82, 84) (col. 7, lines 20-41); thus, indicative of a differential amplifier circuit.

Regarding claim 4: Nylander discloses the output circuit is a circuit formed by connecting the plurality of antennas for detecting magnetic field in series so that the polarity of antennas become opposite from each other (col. 3, lines 24-34; col. 6, lines 15-33).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nylander (US 6,094,173).

Regarding claim 6: Nylander does not disclose the distance of the antenna loop is 10-40 cm; however, it is merely a matter of design choice to specified a certain antenna distance. One of ordinary skill in the art would recognizes that different distances 10-40 cm or 10-50cm would have been an obvious design choice.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Lichtblau (US 4,243,980), Chang (US 5,142,292), Lichtblau (US 4,866,455), Wuidart et al. (US 7,023,391) and Kaltner (US 5,126,749) are cited to show a variety of EAS antenna structures.
